

You're scaling fast with up to 66/100 points won on a quiz

WEBFLOW ENTERPRISE READINESS RESULTS

You're approaching enterprise territory. A small pilot (Branching + SSO + approvals) will reduce risk and unblock speed.

Note: Advisory guidance with optional next steps, no commitments required.

WHAT THIS MEANS

Growth is introducing collaboration, security, and reliability needs. A measured pilot proves value, quantifies impact, and builds the business case, without a full commitment.

Signals we detected

01 Multiple editors and occasional simultaneous changes

02 Emerging compliance or IT involvement (SSO/SCIM requests)

03 CRM/marketing integrations driving more complex flows

04 Regional expansion or early localization needs

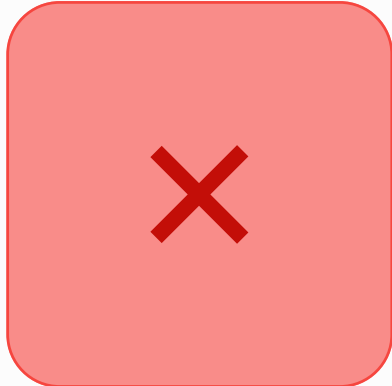

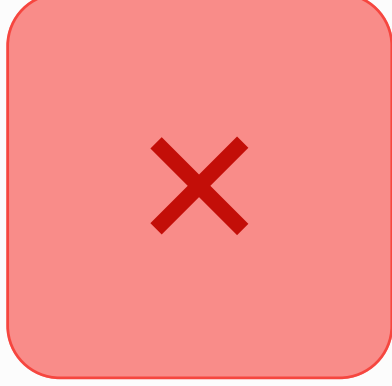

You're near enterprise readiness, pilot to de-risk

STRENGTHS & GAPS

Where you're strong

-  Clear growth path and increasing content velocity
-  CRM/automation foundation for scale
-  Executive interest in reliability and governance

What could hold you back

-  Concurrent editing can cause conflicts or rework
-  Fragmented access control increases risk
-  Ad-hoc approvals slow releases under pressure

RECOMMENDATIONS

No-regret moves (do these now)

- 01 Formalize a two-stage approval (editor → owner)
- 02 Implement performance SLOs (e.g., LCP <2.5s, INP <200ms) with monitoring
- 03 Define access tiers and audit cadence
- 04 Document integration/data flows (PII handling, consent)

If/then triggers

-  If editors >10 or conflicts persist → adopt Branching across high-change templates
-  If IT requests central access → implement SSO/SCIM
-  If 5+ locales or regional teams → build Localization governance
-  If contracts cite uptime/response → negotiate SLAs

Feature shortlist

-  Easily manage updates to workflows
-  SSO/SCIM + role granularity
-  Approvals and auditability
-  Priority support / SLAs on critical paths

THREE PATHS YOU CAN TAKE

A Path

Stay on Standard

Do next: approvals, monitoring, access tiers.
Re-check in 60–90 days.

B Path

Pilot Enterprise on 1–2 workflows

Do next: 30-day pilot with Branching + SSO; measure:

- Publish lead time
- Error/rollback rate
- Incident MTTR (time to recover)

C Path

Full Enterprise rollout

Do next: expand pilot learnings into governance + SLAs.

TIMELINE & OUTCOMES

Expected outcomes

- ✓ Fewer conflicts
- ✓ Faster approvals
- ✓ Improved reliability
- ✓ Clear go/no-go data

Our migration process

Week 1	Week 2	Week 3

Results and client reviews!

3w

New website completely redesigned and migrated from WordPress

3x

Website visitors grew by 3x in the first month since launch

Browworks are amazing, talented, and hardworking people. They are very creative (always coming up with new ideas!) and a pleasure to work with.

ANASTASIA HAMEL
Marketing Director at Epiq Solutions & Xiphos Systems

Stefan and his team we very helpful in supporting us with our WordPress to Webflow website migration. They have all the skills and experience to help with this sort of project. They also helped us improve our design and messaging so that we could have an even better user experience.

JACK FINDARO
Co-founder of Vetted Biz & Visa Franchise

20%

Increase in conversion first 3 months after launching

2x

We designed and developed 2 large websites and full brand identity

HOW WE CAN WORK TOGETHER

Built to match your readiness profile. Month-to-month,
transparent, and outcomes-driven.

What's included

01 Pilot 1–2 high-change workflows
with Branching + approvals

02 SSO/SCIM readiness with IT;
access tiers + audit cadence

03 Performance SLOs & alerts; measure
lead time, rollback/errors, MTTR, LCP/INP

Optional add-ons

Governance
templates

Localization
readiness

KPI
dashboard

Cadence & terms

Weekly pilot
standup

End-of-month
decision memo
